

ActiveDocs Opus Integration

HP TRIM

HP TRIM extends ActiveDocs Opus with advanced document management functionality. Documents generated from ActiveDocs Opus can be stored automatically into TRIM with metadata populated automatically from accurate and up-to-date information. ActiveDocs Opus can achieve a deep level of integration with TRIM and utilize this eDRMS as a repository for Templates, Snippets, and other data used for document creation.

The integration capabilities of ActiveDocs Opus make deployment of a solution based on HP TRIM and ActiveDocs Opus a simple task that does not require in-depth IT knowledge. The document storage location can be defined through simple settings in ActiveDocs Opus. Additionally, the final destination of a document can be determined by business rules on-the-fly during document creation (e. g. assigning a document to a case).

TRIM integration benefits

- Documents automatically stored in the appropriate location
- Metadata populated automatically and accurately
- Utilizing TRIM as a single repository for generated Documents, as well as Templates, Snippets, and other content used for document creation
- Document branding is managed in one location and can be automatically updated across all Templates
- Short response time
- Rapid deployment of ActiveDocs Opus - TRIM integrated solution

Technical information

ActiveDocs Opus supports integration with many DMS, line-of-business applications, and CRM systems deployed on-premises or as SaaS. Third party applications can access ActiveDocs Opus functionality in all layers of document automation: Automated Document Creation, Interactive Document Creation, Document Management, Document Approval, Template Management, Template Approval, and Interactive Data Collection. The following integration methods are available to third party products across all functionality levels: Open Web Services, Public Methods under .NET framework, and Data Source Level Integration.
