

# RBRO SOLUTIONS

Our knowledge, your imagination. Powerful software.

# BinderProfessional

RBRO's BinderProfessional, a product that integrates into WorkSite System Manager (WSM) 2, is an electronic version of a paper binder that facilitates electronic reviews of matters, projects, and activities in the Autonomy iManage WorkSite Document Management System (DMS). With the BinderManagement snap-in, you can keep your workspaces, folders, and/or documents organized and easy to read.

BinderProfessional is fully integrated with Autonomy iManage WorkSite and also enables the inclusion of content directly from the file system. You can easily use BinderProfessional to view key engagement related documents or use the BinderManagement snap-in to put together a closing binder for your clients! Some great features of BinderProfessional and BinderManagement include the ability to:

- click on tabs or elements in Table of Contents
- markup documents in the binder directly
- quickly and easily export binders, tabs, and/or documents to PDF, PDF/A, or Word
- dynamically organize binders and tabs based on existing WorkSite folder structure, metadata, or customized templates
- automatically update existing binders based on predefined criteria

BinderProfessional can offer you all the above and so much more! With BinderProfessional, you can work on files on an airplane on your mobile device and then connect your updates back with the office for your team to act on your instructions.
