

RBRO SOLUTIONS

Our knowledge, your imagination. Powerful software.

FolderExport

Product Description

FolderExport, developed by RBRO Solutions and integrated with Autonomy iManage WorkSite, allows a user to select any WorkSite WorkSpace or folder and export all the documents and subfolders to a specified destination (i.e. hard drive or memory stick).

Typical Challenge

Users are not able to drag and drop folders or WorkSpaces to a new destination outside of WorkSite. It would be necessary for the user to highlight the documents, individually, within a folder and select export from the context menu, complete the WorkSite dialog box to choose the destination, and click [Enter].

This process can become cumbersome as quantities of documents, folders, and WorkSpaces begin to grow with your organization.

The Solution

A user could simply highlight the folder or an entire WorkSpace, right-click and choose Folder Export. When a dialog box appears, enter your destination and click [Go]. With a simple click of a button, watch the export process occur. An index file is created, listing the exported content.

Ideal Uses of FolderExport

When a client requests an electronic copy of all their documents, export and send quicker than the expected turnaround time.

If multiple documents have to be produced electronically for court or discoveries, export and send promptly.

If professionals are moving on to a new opportunity and need to take their documents with them, FolderExport can surely support the process.
