Our knowledge, your imagination. Powerful software.

Link2DMS

Product Description

Link2DMS, developed by RBRO Solutions, is an innovative tool with the ability to intercept any file caption to handle key operations from applications currently not integrated with Autonomy iManage WorkSite. This allows the users to save, open, import, export, upload, download, etc. (depending on the application) directly to WorkSite from within these non-integrated applications or vice versa.

Some of the applications Link2DMS integrates WorkSite with include Adobe Acrobat, Adobe PhotoShop, Editplus 2, Mozilla Firefox, Macromedia, DreamweaverMX, Macromedia Fireworks MX, Microsoft Internet Explorer, Picasa 2, T1 Taxprep 2005, T2 Taxprep 2006, WinZip, WordPad and much more.

PDF Interceptor

This separate option for Link2DMS allows you to convert any supported file type into a PDF as you perform open and save actions through Link2DMS. It is especially useful when uploading Microsoft Word documents to a website. The document can be selected for upload and converted to PDF, during the process there is an option to save the newly created PDF back to WorkSite. Additionally, filing comments can be applied to the document (i.e. track which files have been processed and when).

Saving Without Link2DMS

If a user is working on a NotePad file, saving the file to a Workspace folder requires the user to save it to their hard

drive and then use the File -> Import feature of WorkSite and navigate to the location where it was saved to get it into WorkSite.

Saving Using Link2DMS

The user would simply go through the normal steps of File -> Save and the WorkSite Save dialog box will appear, the user navigates to the correct folder within a Workspace and clicks on the [Save] button.

Opening Using Link2DMS

Also from within the non-integrated application, the user can select File -> Open from the menu and the WorkSite Open dialog box will now appear.

E-Filing

Because Link2DMS intercepts the 'Upload' and 'Download' on internet sites, this allows for the integration of e-filing straight into WorkSite.

Link2DMS with PDF

Interceptor is now integrated with Payne Group's Metadata Assistant product in order to clean documents when printing to pdf and uploading for court filings.
