

Enhance your iManage WorkSite experience by using RBRO's integrated products.

WSM - WorkSpace Management

WSM - Workspace Management is a Snap-in for RBRO's WorkSite System Manager (WSM) solution. The Snap-in enables visual WorkSpace design functionality, complete with the ability to rearrange folders using drag and drop. This tool can manage multiple WorkSpace templates and formats.

SNAP-IN FEATURES

WSM - WorkSpace Management is a visual WorkSpace designer, complete with the ability to manage and rearrange all WorkSite content.

The tasks allow users to automate the generation of new WorkSpaces or simply update existing WorkSpaces based on changes to the associated templates.

The Snap-in provides the ability to update WorkSpace structures based on changes to the related templates. This includes the ability to automatically move sub-folders and files from one folder to another.

Automatically generate WorkSpaces either ad-hoc or by a scheduled WorkSpace generation task based on a pre-configured data definition.

Data definitions take advantage of data from a variety of data sources.

Re-useable variables that can be used to dynamically generate metadata, WorkSpace or folder names from data obtained via a data definition or ad-hoc process.

FRAMEWORK TECHNOLOGY

The WorkSite System Manager (WSM) is a framework which provides delegation capabilities that allow organizations to assign key functionality to high and low level administrators while streamlining multi-database operations.

*Choose and pay **only** for the management capabilities that you want.*

ADDITIONAL FEATURES

1. Applies the principles of flexible standardization to the management of existing WorkSpaces by allowing users to create subfolders with limitations to how far they can go.
2. Enables the user to map existing templates into new template structures via our unique Redefine Template Associations feature.
